

Insist on Allen® Steel Pans and Compodisk® for your Allen Riders and Walk-Behinds. Made to the same exacting tolerances as the trowels themselves, nothing finishes better.

COMPODISK®

NOW WITH STEEL BACK FOR MORE RIGIDITY!

Allen exclusive—and patented—Compodisk® is a composite pan acoustically matched to the concrete to be processed. The Compodisk has acoustic impedance which matches the concrete, thereby imparting its energy into the concrete mass. This causes the concrete to set from the bottom of the slab to the top while maintaining an open surface, allowing the bleed water to escape during the finishing process. This new technology of floating disk is made from a composite material and is only available from Allen. U.S. Patent #6857815

STEEL PANS

Allen Engineering pioneered the use of floating discs (or pans) on riding trowels in 1989 and Allen® Pans remain today the finisher's choice when high F_F Numbers are specified on a concrete floor. Allen's flat pan tolerances cut bumps and fill low spots in the concrete floor.

TWO TYPES OF PANS

Allen offers both Flat (0mm to 3.18mm dish) and Mild-Dished (6.35mm to 9.53mm dish) steel pans made from USA Steel for greater durability. This gives contractors even more pan choices from Allen.

BLADES

Allen Engineering offers a complete line of finish blades, combination blades and clip-on float shoes for your walk-behind or ride-on power trowels. We use high quality steel or composite plastic with high strength rivets to maximize blade life. For the flattest floors, trust only Allen Finishing Blades. Allen Blades fit most other brands of walkers and riders.
