

3-D Profiler System[®]

The Somero[®] 3-D Profiler System[®] is a technological breakthrough which allows concrete to be placed over contoured sites (shaped like a golf course) automatically using a Somero Laser Screed[®]. The highly accurate screeding of concrete, until now restricted to single and dual plane applications, is now available to meet the demands of real 3-dimensional paving.

Concrete paving is a multi-billion dollar market and gaining momentum. A great opportunity exists for Laser Screed[®] equipment owners to capitalize by expanding services to include concrete paving. It can double the use of the SXP-D and S-15m Laser Screed[®]. The 3-D Profiler System[®] is ideal for use on parking lots, loading dock areas, service ramps, and driveways. It's also being used to white top and repair roadways, runways, taxiways, and bridges. Slope and elevation changes are now completely practical and cost effective to achieve.

The 3-D Profiler System[®] is easy to learn and use. It is compatible with all of the latest Laser Screed models (including large line and small line machines), is adaptable to earlier models and is also now compatible with the SMP PowerRake[®].

The 3-D Profiler System[®] comes complete with all necessary components to get you profitably paving right away.

The 3-D Profiler System is compatible with all the latest Laser Sced models.
